Subject: 2510 Valve Transition to AiQ Controller

As part of our continued commitment to innovation and simplification, the Fleck 2510 valve will transition to a single, advanced control platform.

Effective July 1, 2026, the Fleck 2510 will be available exclusively with the Advanced-iQ (AiQ) controller. This update aligns the 2510 with our broader strategy to standardize AiQ, streamlining the product portfolio while delivering a modern, connected control experience.

What's changing?

- The 2510 will move to AiQ as the standard controller, phasing out Electromechanical (EM), SXT, and NXT2 controller options.
- Last order date for 2510 valves with EM, SXT, or NXT2 controllers: **June 30, 2026**. Order quantities will be limited to 10% above your last 6 months' purchases, limited to stock availability.

What stays the same?

- The trusted, proven Fleck 2510 valve platform you rely on.
- No changes to the valve itself, only the powerhead (backplate forward) is updated.
- Beginning July 1, 2026, 2510 will be offered exclusively with the Advanced iQ (AiQ) controller.

Please refer to the attached cross-reference table for a complete list of 2510 AiQ specifications and applicable conversion parts.

We're excited to continue expanding the AiQ ecosystem. Later this summer, AiQ will roll out across the Fleck 2850, 2815, and 2900 valves, along with Hub integration, enabling multi-tank networking and BMS capabilities.

Thank you for choosing Pentair!

Best regards,

Elizabeth Kelly-Goltz
